

Dear member,

As you head into the last week of school and the weather gets warmer, many of you may face some challenges regarding extreme temperatures your classrooms.

We want to hear about those challenges and the environmental issues in your classrooms. Please take two minutes to take our survey #IsMySchoolSick by clicking on the link below and sharing your stories about excessive heat and cold, mold, water damage, and other environmental issues in your classrooms and schools.

The survey is part of a CEA #IsMySchoolSick campaign that includes a pilot program with teachers in five school districts recording daily temperatures and humidity levels in their classrooms.

Your participation in this survey is important and will be useful in conjunction with the data gathered in the pilot schools to educate lawmakers about the extreme heat and cold, mold and other problems teachers and students are facing in our schools. The information will help in our efforts to lobby for the enactment of legislative solutions that ensure a timely, appropriate response to health and safety issues in our schools, including extreme temperatures.

Thank you for participating in this important survey and joining our efforts to improve the student learning and teaching environment in our schools—making them a healthy and safe place to come every day.

Sincerely,

Jeff Leake,
CEA President
